

# SLOTS

# The most animated slot

Sheriff Gaming has developed an exciting new slots game, which goes over and above what players have seen before in 3D animation

**W**ithin a short period, Sheriff Gaming has established a strong position in the online gaming market with state-of-the-art 3D casino games. All games have exciting animations and graphics that meet the player's demand for an exciting and innovative casino experience. At the end of July this year, Sheriff Gaming launched one of their best 3D slot games, entitled Castle Mania. This five-reel 3D slot not only has breath-taking graphics and offers a great player experience, but also has the highest number of animations in the current online gaming market.

**Sheriff Gaming** Sheriff Gaming has developed more than twenty 3D games since it was first established, more than two years ago. We offer solutions for online gaming platforms, with a number of top facilities. For example, 24/7 support, a sophisticated reporting system and different languages. We are also open to requests to improve revenue. We supply our customers with promotional material like videos, single-standing characters, icons, game descriptions and tickers because we understand we need each other to make our casino games work in their environment.

**Castle Mania** In July 2011, Sheriff Gaming launched one of the best 3D slots, which can now be played via different gaming platforms. Castle Mania is famous for being the most animated slot game ever, and with great bonus features it's the best tool to keep slot lovers using your gaming platform. It has 20 win lines, five reels and three rows. Players can receive a number of features like free spins, expanding wild icons, click me bonus and the joker game.

The designers of this game have made Castle Mania an adventure, and it is definitely one of the best games to play online at the moment.

## SHERIFF GAMING

■ Sheriff Gaming was established two years ago and has developed more than twenty 3D games during this period. All games are designed and developed by the in-house development team and all 3D slots offer spectacular animations and amazing bonus features.

**Largest jackpot network** Jackpot enthusiasts need look no further because, with our slots, players can enjoy fast-growing and large jackpot amounts. Every 3D slot is connected to a jackpot network and players pay a share of their bets to the progressive jackpots.

We are convinced this is the key to success because players will bet more when the jackpot grows, in the hope they could be the next winner.

**From ideas to success** All 3D slots are produced by our in-house development team, which includes programmers, professional 3D artists and audio specialists. Brainstorming sessions are a good way to develop new games because creativity and inspiration are the best source for amazing ideas and a spectacular storyline. The next stage is when the ideas go to a 3D studio where the 3D slot will be produced and then launched.

**More slots to come** Sheriff Gaming will continue to surprise the online gaming business with even more innovative 3D slots and table games. Our marketing team did extensive research to find out what casino players want, which confirmed our belief that 3D entertainment is an experience everybody is looking for. But we are aware that making amazing games alone is not the only aspect of the business where we need to offer quality. We want to improve our service to our customers. The partnership with our customers goes much further than just selling casino games.

**Never change a winning team** This is what we will always keep in mind with the production of new games. We have received great feedback from professionals in the industry and gaming platforms are always happy to see new innovations and exciting games for their players. Creativity is our business. Providing the best solutions to move your online casino to a higher level is our trademark.

We are looking forward to telling more people about our company when we present at the EGI Totally Gaming in Milan (booth 212) and the ICE in London (booth 4205). ❖
